

**Listing of the Claims:**

The following is a complete listing of all the claims in the application, with an indication of the status of each:

1        Claim 1 (Currently Amended). A connection structure, comprising:  
2                a connector, having an inner side face defining a chamber formed  
3        with an opening, in which a module body is inserted, and having an outer  
4        side face opposed to the inner side face;  
5                a the module body, inserted from the opening to be accommodated  
6        in the chamber;  
7                a first conductive member, provided on an outer periphery of the  
8        module body which is opposed to the inner side face of the connector in a  
9        case where the module body is accommodated in the chamber;  
10               a second conductive member, fully located within said connector  
11        and provided on the inner side face of the connector, such that the first  
12        conductive member is brought into contact with the second conductive  
13        member in a case where the module body is plenarily accommodated in the  
14        chamber, and  
15               wherein the second conductive member is extended from the inner  
16        side face to the outer side face so as to be connected to an external line at  
17        the outer side face.

1        Claim 2 (Original). The connection structure as set forth in claim 1,  
2        wherein the second conductive member is extended in a direction parallel  
3        to an inserting direction of the module body.

Claim 3 (Canceled).

1        Claim 4 (Original). The connection structure as set forth in claim 1,  
2        wherein the module body is a camera module.

1 Claim 5 (Original). The connection structure as set forth in claim 1,  
2 wherein an end of the chamber opposite to the opening is made open.

1 Claim 6 (Original). The connection structure as set forth in claim 1,  
2 wherein at least a pair of the second conductive member is arranged on the  
3 inner side face of the connector so as to oppose to each other.

1 Claim 7 (Original). The connection structure as set forth in claim 6, wherein  
2 the second conductive member has elasticity.

1 Claim 8 (Currently Amended). The connection structure as set forth in  
2 claim 1, wherein a plate is attached to ~~the bottom face~~ a side of the  
3 connector opposite to the opening of the connector so as to reinforce the  
4 module accommodated in the chamber.

1 Claim 9 (Currently Amended). A connection structure, comprising:  
2 a connector, having a top face surface and a bottom face surface  
3 opposed to the top face surface , and having an inner side face defining a  
4 chamber communicating a first opening formed in the top face surface and  
5 a second opening formed in the bottom face surface ;  
6 a module body, having a top face surface and a bottom face surface  
7 opposed to the top face surface , adapted to be accommodated in the  
8 chamber;  
9 a first conductive member, provided on an outer periphery of the  
10 module body which is opposed to the inner side face of the connector in a  
11 case where the module body is accommodated in the chamber; and  
12 a second conductive member, provided on the inner side face of the  
13 connector, such that the first conductive member is brought into contact  
14 with the second conductive member in a case where the module body is  
15 plenarily accommodated in the chamber;  
16 wherein the ~~firs~~ first opening has a same shape and a dimension as

17 the second opening;  
18 the chamber is shaped as a columnar through hole penetrating from  
19 the first opening to the second opening.

1 Claim 10 (Currently amended). The connection structure as set forth in  
2 claim 9, wherein the bottom ~~face~~ surface of the connector is coplanar with  
3 the bottom ~~face~~ surface of the module body in a case where the module  
4 body is plenary accommodated in the chamber.

1 Claim 11 (Currently Amended). The connection structure as set forth in  
2 claim 9, wherein a plate is attached to the bottom ~~face~~ surface of the  
3 connector ~~so as to reinforce the module accommodated in the chamber.~~

1 Claim 12 (New). The connection structure as set forth in claim 1, wherein  
2 the second conductive member comprises inverted V-shaped contact pins  
3 fixedly secured to the inner side surface of the connector.

1 Claim 13 (New). The connection structure as set forth in claim 9, wherein  
2 the second conductive member is fully located within said connector.

1 Claim 14 (New). The connection structure as set forth in claim 9, wherein  
2 the second conductive member comprises inverted V-shaped contact pins  
3 fixedly secured to the inner side surface of the connector.
